**Edward J. DePeters Receives
American Feed Industry Association Award**

Savoy, IL — The American Dairy Science Association is proud to announce Edward J. DePeters of the University of California–Davis as the 2007 recipient of the American Feed Industry Association Award. The award was presented on Tuesday, July 10, 2007, during the awards ceremony at the ADSA Annual Meeting in San Antonio, Texas.

The American Feed Industry Association Award was created to promote research in dairy cattle nutrition. The award recognizes an individual who has made a worthy contribution to research of dairy cattle nutrition within the ten years immediately prior to the year of the award. The winner must have had original research work published, conducted research at a public institution, hospital, or similar institution, and been a member of the American Dairy Science Association for at least five successive years.

DePeters has a prodigious research record during his almost 30-year career and a very impressive and diverse body of work in the past decade. He maintains this impressive level of research productivity in addition to a vigorous teaching program. His interests are far reaching, but he is well known for his accomplishments linking dairy cow diets with milk composition, especially of butter fat.

It is with great pleasure that ADSA and American Feed Industry Association present Edward J. DePeters with the 2007 American Feed Industry Association Award.
