Glen Broderick Receives ADSA Fellow Award

Champaign, IL—The American Dairy Science Association® (ADSA®) is pleased to announce Glen Broderick as the 2019 recipient of the ADSA Fellow Award. The award will be presented on Sunday, June 23, 2019, during the opening session at the ADSA Annual Meeting in Cincinnati, Ohio.

The purpose of the ADSA Fellow Award is to recognize dairy foods division and production division members of ADSA who have rendered distinguished service to the dairy industry over 20 years or more. The winner must have made exceptional contributions to the dairy industry, to a dairy-related discipline, or to ADSA; in addition, the winner must be and have been a member of ADSA for a minimum of 20 years.

Following graduate school, Glen Broderick was faculty at Texas A&M and then scientist and professor at the Dairy Forage Center and University of Wisconsin–Madison. His research contributions relate to dairy protein nutrition: quantifying in vivo microbial protein synthesis and degradation, assessing protein degradation in vitro, determining nutritional value of numerous feedstuffs, showing that cows can be fed substantially less protein without compromising productivity, and developing milk urea nitrogen for assessing protein status during lactation. His research group promoted and applied omasal sampling in North America. He has trained more than 50 students, postdocs, and visiting scientists. His research output includes more than 150 publications with more than 7,000 citations.

It is with great pleasure that ADSA presents Glen Broderick with the 2019 ADSA Fellow Award.
