Nicole Martin Receives ADSA Foundation Scholar Award in Dairy Foods

Champaign, IL—The American Dairy Science Association® (ADSA®) is pleased to announce Nicole Martin as the 2019 recipient of the ADSA Foundation Scholar Award in Dairy Foods. The award will be presented on Monday, June 24, 2019, during the awards ceremony at the ADSA Annual Meeting in Cincinnati, Ohio.

The ADSA Foundation Scholar Award in Dairy Foods was created to recognize a young scholar from the dairy foods division and their potential in research and educational leadership and to identify critical issues affecting the future of the dairy industry. Special requirements include 10 years or less since earning a final academic degree, current active membership in ADSA, exemplary research or educational programs (instruction, extension, or industry), and potential for future leadership.

Nicole Martin is the associate director of the Milk Quality Improvement Program in the Department of Food Science at Cornell University. She received her BS, MS, and PhD degrees in food science from Cornell University. In her role, Martin oversees the farm-to-consumer dairy microbiology research conducted in the Milk Quality Improvement Program and works closely with dairy industry stakeholders, including producers and processors. Martin studies the transmission of spoilage organisms from environmental niches into raw and processed dairy products, strategies to reduce or eliminate this transmission, the implications of spoilage organisms on finished product, and methods of detection.

It is with great pleasure that ADSA and the ADSA Foundation present Nicole Martin with the 2019 ADSA Foundation Scholar Award in Dairy Foods.
