Heather White Receives ADSA Foundation Scholar Award in Dairy Production

Champaign, IL—The American Dairy Science Association® (ADSA®) is pleased to announce Heather White as the 2019 recipient of the ADSA Foundation Scholar Award in Dairy Production. The award will be presented on Monday, June 24, 2019, during the awards ceremony at the ADSA Annual Meeting in Cincinnati, Ohio.

The ADSA Foundation Scholar Award in Dairy Production was created to recognize a young scholar from the production division and their potential in research and educational leadership and to identify critical issues affecting the future of the dairy industry. Special requirements include 10 years or less since receiving a final academic degree, current active membership in ADSA, exemplary research or educational programs (instruction, extension, or industry), and potential for future leadership.

Heather White is an associate professor at the University of Wisconsin–Madison in the area of dairy cattle nutritional physiology. White’s research program focuses on the health and nutrition of dairy cows during the transition period and is centered on hepatic and whole-animal nutrient partitioning and metabolism. Notably, White’s research strives to determine the mechanism of nutrient partitioning, feed efficiency, and metabolic health in order to provide science-based solutions and interventions to improve dairy cow health and productivity. White is also a hands-on researcher, mentor, and instructor at both the graduate and undergraduate levels.

It is with great pleasure that ADSA and the ADSA Foundation present Heather White with the 2019 ADSA Foundation Scholar Award in Dairy Production.
